REFERENCES

Todo App (07/2024)

- A simple and intuitive Todo application that allows users to add, edit, delete, and track the status of their tasks.
- User Authentication**: Users can register, log in, and log out.
- CRUD Operations**: Add, edit, delete tasks, and mark tasks as completed.
- Real-Time Updates**: Using Firebase Firestore for real-time data handling, allowing users to see updates immediately.
- Technologies Used**: Frontend: React, TypeScript, React Hook Form(for form handling); Backend and Database: Firebase Authentication (for user authentication), Firebase Firestore (NoSql database); Styling and UI: Material-UI(MUI) library for responsive design across different devices.
- Github Repository**: <https://github.com/blintdm98/todo-app>

Crypto Exchange Platform (04/2024)

- User Authentication and Authorization**: Implemented the login system. Stored and retrieved user data from localStorage to maintain login state and preferences.
- User Management**: Added functionality for users to manage their cryptocurrency list.
- Technologies Used**: Frontend: Angular, TypeScript, HTML5, CSS3, Bootstrap; Storage: localStorage for client side data-management; API Integrations: Integrated cryptocurrency data API for real-time information
- Github Repository**: <https://github.com/blintdm98/crypto-exchange>

Budapest Map Application (08/2023)

- Developed a web application using React and Next.js.
- Integrated Google Sign-In.
- Utilized Cesium JS to display a 3D map of Budapest, focusing on accurate and efficient rendering of geographic data.
- Added a pin on the Cesium JS map to mark the office location using the Entity API.
- Github Repository**: <https://github.com/blintdm98/MapApp>
